

Thank you for downloading our Virtual Dedicated Server (VDS) brochure! We'll bring you more information of our VDS service.

## Advantages using Virtual Dedicated Server (VDS)

### Easy Maintenance

There is no need to go to the data center to look into your server when there is something has set wrong and not booting up

### Better Flexibility

Unlike shared hosting, you are limited to the user access level rather than an administrative level to run any kind of services. Your VDS is assigned with your own IP and resources and not shared among with others users.

### Good Entry Point for Server Beginner

If you are a beginner and has not dealt with setting your own server before, choosing the right operating system and running your VDS would be a good start. You may test anything on your virtual server until you feel comfortable running your own server.

## System Specification

Your virtual server will be created according to the specification you choose when you subscribe our service. By default, we setup the operating system for you and provide you with the welcome email containing all the credentials. If you need to set it up yourself, you will need to contact us.

Our host-node will be equipped with high-end server hardwares and an optimized environment.

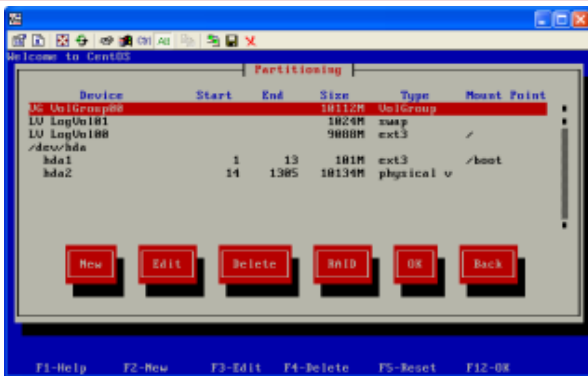

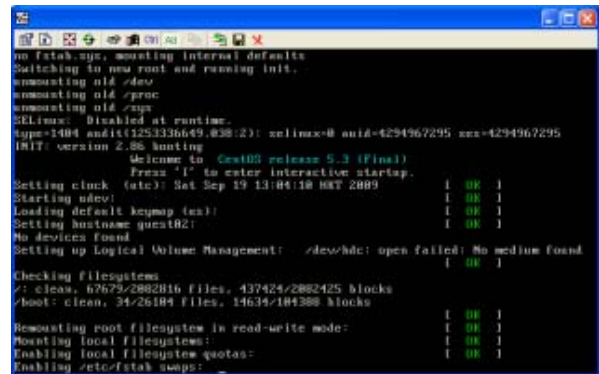

## Overview of your VDS

Each of our VDS acts like a real dedicated server. You may choose any operating system, Debian, CentOS, etc for your system. You may also pick a 32-bit or 64-bit O/S. With our VDS service, you may remote connect to our server to setup your own server, assign your swap space and create your own custom partitions just like you do when you install the O/S on your server!

### Installing the CentOS and Windows to the VDS

### Watching the CentOS VDS boot up process

You may install your own kernel, load any iptable modules, mount remote server (nfs / smb), and run any kind of services on your server!

Thank you for taking your time viewing our virtual dedicated server brochure. If you have any other questions, please let us know. Our contact details can be found at our web site <http://www.yupapa.com/>
